Design of Reinforced Concrete Structures - Course

Reinforced concrete structures are normally designed according to rules and regulations or recommendation of a code such as ACI-318, CEB, Eurocode 2 or the like. WSD, USD or LRFD methods are used in design of RC structural members. Analysis and design of RC members can be carried out by using linear or non-linear approaches.

Different Methods of Design of Reinforced Concrete Structures

Working stress method is used for the design of Reinforced concrete, Steel and Timber structures. The main assumption in the WSM is that the behaviour of structural material is restricted within linear-elastic region and the safety of it is ensured by restricting the stresses coming on the members by working loads.
