In a velocity flowmeter the flow is calculated by measuring the speed in one or more points in the flow, and integrating the flow speed over the flow area. Pitot Tubes The pitot tube are one the most used (and cheapest) ways to measure fluid flow, especially in air applications like ventilation and HVAC systems, even used in airplanes for speed measurement.

Impeder rods and tubes are used in the concentration of magnetic flux in the High Frequency Induction Welding of steel tubes and pipes. The primary function of an impeder is to increase the impedance of the current path around the inside circumference of the tube, thus diverting more of the available energy into the weld "vee".
